Application/Control Number: 09/313,278

Art Unit: 2166

Claims 14-27 and 30-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

<u>Claim 14</u>: The phrase "practical medical, veterinary, or health care information" is indefinite. The phrase "disease or health subjects" is indefinite. The phrase "telemedicine methods" is indefinite.

<u>Claim 15:</u> The phrase "related to practice guidelines relevant-to the inquirer's geographic region".

<u>Claim 19:</u> The phrase "state of interest" is indefinite.

<u>Claim 30:</u> The phrase "practical medical, veterinary or other health care information" is indefinite. The phrase "disease or health subjects" is indefinite.

Claims 21-24 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claims 21-24 are addressed entirely to intended uses of the claimed "system" without any recitation of structure. Accordingly, these claims do not further limit the subject matter of previous claims and cannot be attributed any patentable weight.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

⁽e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

37

Claims 1-17, 19-24 and 28-30, rejected under 35 U.S.C. 102(e) as being anticipated by Douglas et al. ('688).

Douglas et al. discloses a processing device which is configured to provide multiple levels of service to a user. At a first level of service, a user can perform research on the system website and download data and research articles containing medical information (col. 14, lines 54-57 and col. 16 lines 21-38). At a second level of service, the user can interact with a group therapist using on-line teleconferencing capabilities (col. 12, lines 8-22). At a third level of service, a user can be monitored for alarm conditions, and upon triggering of the alarm conditions, can be placed into electronic contact with the physician (col. 10, lines 17-31).

The processing device can use the alarm feature to distinguish between a need for additional information and a need for contact with a physician (col. 10, lines 17-31).

The system involves the interaction of a patient with at least two medical professionals: A medical doctor and a group therapist who monitors the on-line group therapy sessions.

The processing device receives an image of the patient and transmits to others during the group therapy sessions.

The patients who interact with the system have access to libraries of research studies (col. 16 line 34).

The patients who interact with the system receive medical treatment in the form of group psychotherapy.

The processing device monitors the status and progress of the patient by use of a journal function (FIG. 12).

Application/Control Number: 09/313,278

Art Unit: 2166

The processing device has a weighing function in the form of a programmed alarm system, which weighs responses from a user and decides whether those responses are compliant or non-compliant with desired pre-set goals (col. 10 lines 17-31).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 18 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Douglas et al. ('688).

The system of Douglas et al. ('688) allows a user to access a physician but does not specifically allow a user to select from a listing of different physicians. Examiner takes Official Notice that it is well known in the art of insurance plans to produce listings of approved physicians and provide this information in various media, such as in booklets, telephonic referral services and on-line via a network. It would have been obvious to one of ordinary skill in the art to modify Douglas et al. to utilize a physician referral service, either on-line, or by providing phone number so as to permit telephonic access to such data, as is well known in the art to permit patient access to insurance approved physicians.

Claims 14, 20, 25-27, 30 and 32-36 are rejected under 35 U.S.C. 102(e) as being anticipated by Brown ('563).

Brown ('563) discloses a system that allows a patient to interact with a physician via a wide area network or the internet. The system has a first level of service where the system can direct a series of questions to the patient (FIG. 16) or, on a second level, receive measured data

Application/Control Number: 09/313,278

such as blood glucose level, blood pressure, pulse and temperature(col. 11, line 28 and col. 11,

lines 52-57).

Any inquiry concerning this communication should be directed to Sam Rimell at

telephone number (703) 306-5626.
